

A woman with long brown hair, wearing a teal dress, is sitting on a boat and smiling. In the background, a man in a light blue shirt and sunglasses and a woman with blonde hair are also on the boat. The boat has brown leather seats and a blue hull. The scene is set against a bright, hazy background, possibly a sunset or sunrise.

WHAT IS SEADEK?

SeaDek is a revolutionary product utilized not only by the top boat builders in the marine industry, but also in the aftermarket by boat owners seeking custom products. Made from closed cell PE/EVA foam, SeaDek products offer safe and comfortable alternatives to marine traction products currently on the market. Easy-to-install and customizable, SeaDek replaces the need for molded in non-skid.

Formulated with an acrylic based high-bond pressure sensitive adhesive, SeaDek's robust peel-and-stick application lends itself to easy installation that requires no mounting of hardware. SeaDek is available in a variety of textures, thicknesses, and colors, providing virtually endless customization. In addition to our standard options, SeaDek offers premium options such as **Triple Lamination**, **Routed Patterns**, **Static Laser Logos**, **Full Sheet Laser Patterning**, and more!

6 mm Brushed Storm Gray Over Cool Gray **Classic SeaDek** With 2" **Faux Teak Routing** Featured on a Regal 38 SAV

BENEFITS

- Closed cell and UV-resistant
- Exceptional traction, even when wet
- Shock absorption, which decreases fatigue
- Unparalleled comfort when standing, walking, or leaning on surfaces
- Can be tailored to fit endless applications on nearly any type of boat
- Protection for boat surfaces against scratches, chips, and dents
- Noise reduction characteristics - ideal for fishing

IF YOU HAVE A BOAT, YOU HAVE A PLACE FOR SEADEK!

9 mm (Triple Lamination) Brushed Dark Gray Over Bahama Blue Over Black **Classic SeaDek** With **Designer Laser Patterning** and **Routed Logos** Featured on an Invincible 37' Catamaran

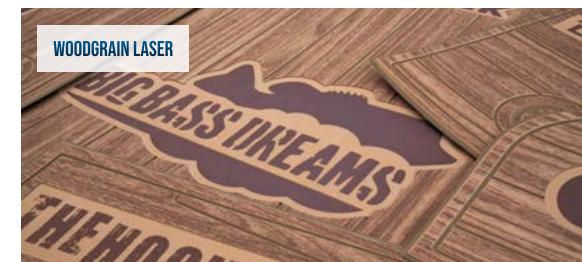

While out-of-the-box SeaDek is always a great addition, our goal is to provide exceptional products as unique as our customers, furthering our mission to connect people with what they love.

OUR MISSION **TO CONNECT PEOPLE WITH WHAT THEY LOVE**
 by continuously innovating, improving, and putting our customers first.

SCAN HERE TO WATCH THE SEADEK STORY!

We are constantly working on new ways to help our customers connect with their boats. From our broad selection of colors and thicknesses, to premium options such as **Captain's Series Fish Graphics** and **Designer Laser Patterning**, the possibilities for customization are endless!

EMBOSSSED

5 mm Embossed Storm Gray Classic SeaDek Featured on Team Brunel's Volvo Ocean 65

SeaDek is available in three different material options: **Classic SeaDek**, **SeaDek HD**, and **Dual Density**. Each option is engineered for optimum performance in any and all environments. You can never go wrong with **Classic SeaDek**, but we understand special circumstances warrant specialized equipment.

CLASSIC SEADEK

Classic SeaDek is our innovative, original material. Though many improvements have been made over the years, the basic composition remains the same. **Classic SeaDek** is manufactured with a deliberate balance of PE and EVA foams for durability and comfort.

APPLICATION: Peel-and-stick pressure sensitive adhesive
COLORS: Any of our 35 SeaDek colors (**Pages 8-9**)
THICKNESSES: Available in any thickness (**Page 10**)
TEXTURES: Brushed or Embossed (**Page 13**)

SEADEK HD

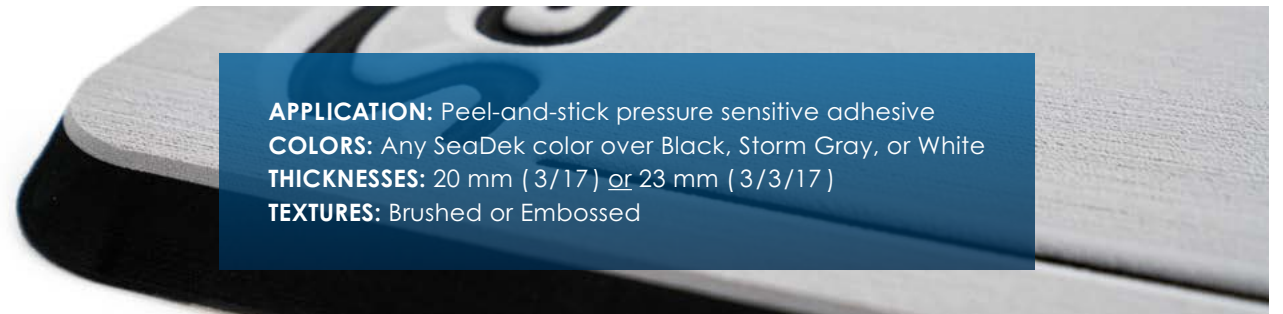

SeaDek HD is our most rugged, durable option. The rigid outer-skin of our Tetrapod texture is scratch and stain resistant, and built to endure the abuse of high-traffic and commercial use. **SeaDek HD** is available as a 5 mm layer or as a laminate with any **Classic SeaDek** base layer.

APPLICATION: Peel-and-stick pressure sensitive adhesive
COLORS: Black or Storm Gray over any of our 35 SeaDek colors
THICKNESSES: 5 mm or 5 mm over any Classic SeaDek base
TEXTURE: Tetrapod

DUAL DENSITY

Dual Density was created for long days on the water. Composed of a **Classic SeaDek** top layer and a **Low Density** base layer, **Dual Density** boasts the traction you've come to expect from SeaDek with more give, making it the best option for helm pads, coaming bolsters, and seating.

APPLICATION: Peel-and-stick pressure sensitive adhesive
COLORS: Any SeaDek color over Black, Storm Gray, or White
THICKNESSES: 20 mm (3/17) or 23 mm (3/3/17)
TEXTURES: Brushed or Embossed

ROUTED LOGOS

Our original technique for incorporating custom logos was by **Routing**, or “pocketing,” which remains the most popular method today. If using a two-color laminate, we simply CNC cut through the top color, exposing the bottom layer to give a contrasting logo which provides maximum visual impact. Because **Routed Logos** are machined with specialized bits, there are minimum size limits dictated by the complexity of the logo, which can be identified and determined by our CAD team.

ENGRAVED LOGOS

Engraved Logos are ideal for single-color laminates or multi-color laminates featuring subtle designs. To **Engrave Logos**, we CNC cut into the top layer of PE/EVA foam in a similar fashion to **Routing Logos**, but we don't cut all the way through. This provides an elegant, low-profile, lower-contrast logo. Minimum size limits may be identified and determined by our CAD team based on the complexity of the logo or design.

STATIC LASER LOGOS

Static Laser Logos are perfect for instances where you would like to incorporate crisp logos and graphics into your kit that are either too small or too detailed to be machined effectively. This premium custom feature is virtually limitless when it comes to fine details and provides a sleek, modern finish with a more subtle appearance than traditional CNC **Routing** or **Engraving**. Please see **Page 26** to view all colors available for laser. *Note: logos may not exceed 11"x11"*

6 mm Brushed Storm Gray Over Black Classic SeaDek With 2" Faux Teak Routing Featured on a Sea Ray SDX 270

ROUTING

Routed Edges are a custom SeaDek feature that comes standard on most kits. CNC machines **Route** a beveled edge on all finished products to provide an aesthetically pleasing look and feel. Additionally, our CNC machines can be used to **Route** through the top layers of any two or three-color kit to expose the bottom colors and create the pattern of your choice. Logos may also be **Routed** into the pad, but there are some limitations due to minimum size requirements. Please contact customer service for more details (endusersales@seadek.com or [321-632-4466](tel:321-632-4466).)

ENGRAVING

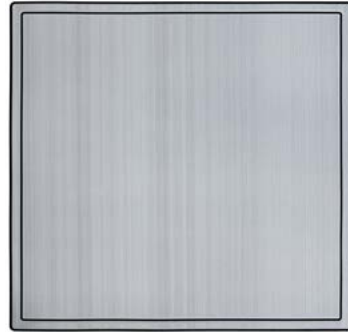

Engraving provides subtle, low-contrast detail and can be used to create elegant logos and designs. **Engraving** is executed by **Routing into, but not through**, the top layer.

ROUTING PATTERNS

In addition to **Routed Logos** and **Routed Edges, Routed Patterns** may be added to any part(s) in any two or three-color kit.

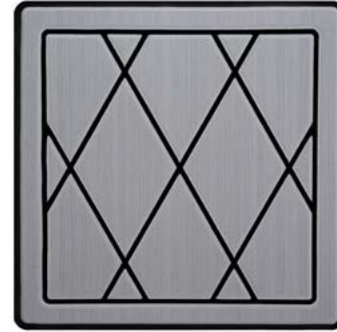

Your pattern may be routed through either the first or second layer in three-color kits.

Designer Laser Patterning is a custom option that allows for nearly infinite detail, producing a subtle yet distinctive appearance as the computer-controlled laser burns your desired pattern into your SeaDek. This option can be used in conjunction with **Routing** or **Engraving** to create a truly one-of-a-kind look.

COLORS & TEXTURES

Designer Laser Patterning is available on the following colors:

Stock Designer Laser Patterns are applied on our **Brushed** texture.

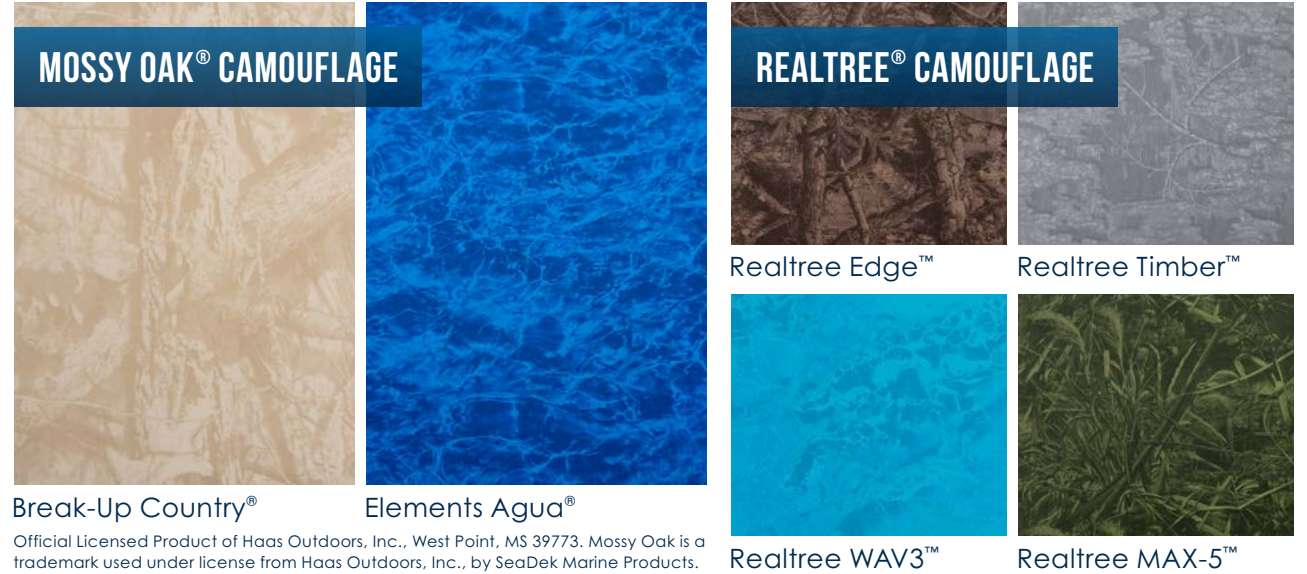

Licensed Laser Patterns and **Woodgrain Laser Patterns** are applied on our **Smooth** texture.

STOCK DESIGNER LASER PATTERNS

We offer a library of production-ready **Stock Designer Laser Patterns**. Please see **Pages 28 and 29** or visit www.seadek.com/custom-features#designer-laser-patterning to view all 50 patterns.

WHAT'S NEXT?

Well, where are you coming from?

**I RECEIVED MY
TEMPLATE KIT**

Utilizing this guide and the enclosed **Customer Template Instructions** for reference, complete your **Templates** and fill out the included **Material Information Sheet**. Reuse your shipping carton and prepaid return label to ship both back to us. Please remember to include as much detail as possible, as missing information may result in increased lead times.

See the Enclosed Custom Lifecycle Document for an In-Depth Look at the Custom SeaDek Process (Including Estimated Lead Times and Shipping Instructions)

**I RECEIVED
MY DRY FITS**

Follow the enclosed **Dry Fit Instructions** to verify that each piece fits your boat. If your **Dry Fits** are correct as-is, reply to your original drawing approval email and await instruction from your sales representative. If revisions are required, please note desired changes on your **Dry Fits** and complete **Page 2** of the **Dry Fit Instructions** prior to mailing both back to us at the provided address.

**HELP ME OUT,
I'M NEW HERE!**

Just met us and not sure where to start? Luckily for you, the methods for getting your hands on SeaDek are (almost) as vast as our Custom Options offering. Whether you're looking to get your feet wet with ready-to-apply product and gear, or you're ready to dive in with a full custom kit – we have your back. Scan any of the QR codes in the box below to get started or reach out to customer service via email at customerservice@seadek.com or by phone at [321-632-4466](tel:321-632-4466) for assistance.

STILL CHARTING YOUR COURSE?
